□ **Abstract:** Writing is a systematic process of recording speech sounds through a symbol system (alphabets). In both an individual's life and in the life of mankind, writing comes after speech. It is a learned skill not an acquired one. Writing also serves to standardize a language. Spoken language is prone to variations from one individual to another, or from one regional (idiolect) group to another (dialect). Spoken ideas, narrated events and experiences are momentary happenings. But the written form is a single one. Hence, it requires training in the art of writing i.e. both how to write words and how to create meanings? So as to become familiar with the verbal communication completely and also for accomplishing the ability, this may be basic to ace the four aptitudes like Listening, Speaking, Reading and Writing. The present paper attempts to understand the problems of learner's difficulties in the concepts of writing with an intension to develop instructional strategies. The need of studying about the difficulties of learners in writing is felt as it is a common problem in most of the cases. Though there is a difficulty in the communicating pattern to express the ideas, even it is not possible for most of the students to present it in the written form also. It is much more disconcerting to note that even after ten to twelve years of learning the language in English medium schools, the students do not equip to impart through composed talk skillfully and unmistakably. So there is definitely a need to focus more on writing skills and learn the craft of drafting the text in a formal format and to make it as a meaningful passage.

□ **Keywords:** Standardize, Idiolect, Dialect, and Spoken language

1. INTRODUCTION

Writing abilities are the ability to put ideas into words while using proper grammar, punctuation, and other essential writing components. It's an essential part of communication [1,2]. Writing well allows you to more easily and clearly communicate your thoughts to a far larger audience than you could when speaking face-to-

face or over the phone. The five primary elements of excellent writing are structure, focus, elaboration and support, grammatical conventions, and style. Writing effectively promotes understanding and the growth of a professional writer [3]. Professional writing is a form of written communication used in the workplace to support educated decision-making by professionals, including academics, physicians, lawyers, and entrepreneurs [4].

^ajayashree.sl@vistas.ac.in, ^bfarhanazabeen.sl@vistas.ac.in, ^cabeetha.sl@vistas.ac.in, ^djaneausten.sl@vistas.ac.in

Professional writing often has a formal tone and contrasts from written content that is deemed literary or artistic. The distinctiveness of good writing depends on clarity and attention. Everything makes sense with well-written material, and readers are never confused or forced to reread sections in order to understand what is happening. In addition to being intelligible, a well-structured piece of writing is presented in a logical and visually appealing manner [5,6]. Therefore, formal instruction and practice are crucial for developing writing skills. Understanding the nature of writing is essential due to the importance of writing in a second language [7]. Analyzing the nature requires looking at the intricacy of writing, different aspects of teaching or learning to write, and assessing the amount of meaning it delivers.

Thus, some of the problems that academics in the fields of teaching writing concepts and second language acquisition try to answer are: How does writing express meaning? What part does writing play in teaching or learning a second language? What effects do readers, audiences, context, and purpose have on writing? For decades, academics and scholars have attempted to describe the concepts that make up writing and the degree to which writing is a valuable talent in order to answer the questions indicated above.

Also, it proved through severe studies and strategic and logical explanations, linguistic, cognitive, psychological and sociological factors will influence the writing skill. In a nut shell, the chapter presents

a few of the elements that must be taken into account when comprehending the notions of writing skills.

Nature of writing – An overview of research

1. Concepts of writing
2. Stages of writing
3. Specifications of writing objective
4. Requirement of writing skills
5. Teaching writing as a second language
6. Problems in teaching the writing
7. Different approaches to the teaching or learning of writing.

As previously said, the approach of teaching writing in second language classrooms is the main topic of this study. It is important to comprehend the various processes involved in teaching or learning to write and to examine what writing in a second language is. The ensuing sections provide a thorough examination of the aforementioned concerns.

2. CONCEPTS OF WRITING

Writing developed primarily as a means of recording sound system of a language through symbols on paper. It requires organization, logical, development, accuracy, of

expression, relevancy, grammar and mechanics of writing. Mechanics involves presentation and how a composition looks on the paper. It is a skill of arranging and creating meaning through visual presentation. Writing also involves variety, simplicity, using conventions and choosing an effective vocabulary. The key concepts are purposive, following strategy, style, point of view and persona.

The main cause is considered as the students do not get efficient guidance in instructing the method to compose. Incomprehensibly, however composing is viewed as the most troublesome aptitude to be obtained and the whole assessment framework depends on composing, the instructing of composing stayed as a disregarded board [8,9]. Composing isn't just a troublesome expertise to secure; it is likewise a tedious movement. Consequently, at whatever point there is a strain to finish the schedule, composing would be the principal thing to be consigned to 'schoolwork'. The general pattern is to give composing assignments toward the finish of the class with next to zero 'talk'. Adhering to the guidelines given by the educator, the understudies carelessly finish the assignment at home. While rectifying these assignments, the instructor's consideration lies at the last yield and not in transit of culmination.

Indeed, still in situations where an educator endeavors to help the understudies recorded as a hard copy, the outcomes are not empowering. Any accomplished instructor would affirm that educator's endeavors to design any movement preceding or during the way toward writing to go around the problem(s) she/he sees or to design some sort of follow up action don't make composing for understudies simpler or increasingly productive.

The educators and the students keep on feeling disappointed at the failure of students to compose skillfully and reasonably. Subsequently, one needs to get some information about the guidance or training which doesn't support the understudies and to know whether there is any endeavor, may be unraveled [10]. Their difficulties do not yield satisfactory results. There may be perhaps a need to question the understanding of the learner's difficulties and look at the problem afresh. As per the learner's difficulties, it is the perception which counts. Whether the percentage of the writers (here, the learners); or, of the teacher or, of the expert researchers should considered while tackling the learners' difficulties, is an open task.

As the instructing and understanding may be an intelligent class, that appears to be very consistent to comprehend both the instructors' and the students' points of view. On the off chance that both the instructor and the student – do at cross-reason, no understanding may happen. In the event that the students' view of the troubles in their composing is particular with the educator's impression of the student's challenges in their composition, the student's need won't be met. The instructor would clearly attempt to give assistance to the challenges she/he sees. In such

case, the students would keep on encountering or feel a similar trouble. At the point when they work with a mind hindrance that the educator has not tackled their trouble, they would not have the option to impart successfully recorded as a hard copy.

Taking a shot at the supposition that there may be an inconsistency between the instructor’s and the learner’s viewpoint on the troubles confronted by the learners, the present study looks at both the points of view alongside the written work analyst’s point of view. Since the challenges saw during the time spent written work are identified with the level of a man’s comprehension of the ideas, the study takes alternate points of view on the ideas of composing.

The present study concerns with Teaching of writing skills to students of engineering. As mentioned before, our whole state assessment framework being reliant on composing, this may be significant to those understudies should be outfitted with the composing aptitudes for the success. Composing may not procure significance simply because of getting accomplishment in assessment; this may be significant in its own right in getting education in real sense. Why and how it is so, is a question to be dealt. The present chapter attempts to provide an answer by discussing the significance and the nature of writing in educational organizations and academic programmes.

The discussion on the nature of writing necessitates an overview of composition, research by presenting the contrasting views about writing skills in different philosophical and linguistic perspectives, thereby establishing the fact that writing skills are challenging and a difficult task to acquire. Since the study attempts to understand difficulties faced by learners during the process of writing, a discussion involved in the writing skills seems relevant here, along with the discussion by novice writers.

3. LOGICAL PROCESS

Since writing is a logical process, it follows that it can be done in stages. These stages don’t happen distinctly. Writers do all the together.

- Planning
- Writing
- Revising

4. STAGES OF WRITING

4.1 Specifications of Writing Objective

Writing is a complete skill. For the Indian students, writing poses several problems. There are many similarities and dissimilarities between Indian languages and English. Naturally, the ability of the students to express freely in writing will be extremely limited. The average pupil will express his ideas within a limited stock of his language material. So, a systematic training in the skill of writing should be imparted to the students. The training in the skill of writing should bring some behavioral patterns in the students like adopting capitalization, punctuation, correct spelling, spacing, and good handwriting, with slants, shapes and reasonable speed.

4.2 The Need for Writing Abilities

According to Byrne [4], writing has several educational benefits in the early phases of a course focused on oral proficiency.

- (i) Through oral practice, this enables students who are insecure realize that they can not only write but also improve their reading skills through writing.
- (ii) In addition to providing students with psychological gratification, improving writing skills helps provide them with multiple clear indicators that demonstrate their progress in verbal communication.
- (iii) In addition to adding diversity to class activities, writing also serves as a respite from oral work and helps to consolidate language taught verbally.

Byrne makes a distinction between the learning environment of writing in one’s native tongue and writing in a dialect, notwithstanding the previously established viewpoints on demonstrating composition. According to him, the majority of students learn how to write in their mother tongue at school, usually between the ages of five

Fig. 60.1 Logical process of writing

Source: Author

and seven. They currently have a widely developed grasp of the spoken dialect, which is adequate for their social needs nevertheless, but their exposure to the composed dialect is still limited. The majority of understudies have likely been exposed to some degree of addressing by being forced to read resoundingly. In any event, for many of them, writing itself is a different experience. Accordingly, Byrne [5] goes on to say that there are three reasons why the majority of kids dislike writing in their mother tongue.

1. A variety of writing techniques aid in the expression of key characters that learners find difficult to handle.
2. Outside of the classroom, writing is not very useful for social interaction.
3. Thirdly, students lose the opportunity to practice writing after they graduate from school because of their writing style and the belief that writing is not a valuable social interaction tool outside of the classroom. As a result, they stop using this talent.

Given that learners have less experience to the L2 than to the mother tongue, Byrne's examination of the various forms of native language composition is especially relevant to situations involving second mother tongues, where issues are probably more severe. In the current context of teaching or studying writing in L2, teachers frequently fail to create opportunities for genuine interaction, which involves the understudies in the movement.

4.3 The Significance of Basic Writing Skill

Studies have found that individuals typically pay seventy to eighty-five exploit their time period deliberately act, writing, reading, speaking and listening. Usually most of AN executive's day is spent in communication modes. Technical talent whether or not it's in accounting, marketing, sales or technology might fetch the primary job however ability to talk and write effectively solely facilitate to stay it still as prospect. In any organization, technical skills matter less and additional general skills as well as the flexibility to write down and speak can confirm how briskly and much you go. a serious study showed that the shortcoming to write down was a serious reason that accounts were discharged.

Most students perceive the importance of effective speech communication skills. However some aren't convinced that they have to write down well to succeed professionally. They expect a secretary or technical author can do their writing, or suppose that they will use kind letters if they need to write down. Every of those claims has elementary flaws in their logic. Today, several employees in business and government still have their letters, memos and reports typewritten on a pc by somebody else. But this case is ever-changing apace as additional and additional business's notice the economy and ease of the prevalence and standardization of computerized workplace package

packages. A missive could be a prewritten fill-in-the-blank setup designed to suit normal things. The author will modify a missive or report by having it severally stuffed out with the recipients however can leave a really dangerous impression. If not developed the abilities necessary permanently writing and original thinking, it in all probability comprehends ones potential in reaching their career goals.

5. WRITING SKILLS IN MODERN SCENARIO

One way to communicate is through writing. In addition to providing entertainment, writing can be used to convey descriptions, data, assessments, convince readers, and offer solutions to issues. One of the fundamental abilities that people learn in their early years is writing, which is crucial for reaching professional and commercial objectives. Writing is a talent and that, like several ability, it is able to be advanced thru steerage exercise. Writing enables us to learn a fixed of ideas and a vocabulary of language analysis and rhetorical approach. The extra we recognize approximately how language and persuasion work, the extra functions of favor can be recognized and used; alas, this region isn't being given the due significance. Sometimes where writing abilities is an important asset are:

a) Tutoring:

Writing skills is taught and found out in college and college. The skill of expressing one's mind and speaking ideas and perspectives to others is developed here. Exams are a liberal opportunity to demonstrate one's writing competencies. This could stand in proper stead in any chosen avenues of existence.

b) Searching for an ideal work

The recruiter gets heaps of applications which he sifts via. If one desires to be observed, one must write content material, which is marvelous and specific. One need to gift their credentials in an fashionable and systematic style to create a favorable effect at the recruiting authority. The content must be concise and lucid and not using a grammatical or spelling mistakes.

c) Web Content Writing

Millions of people use internet as the premier source of information to attain data pertinent to them. There are many web content material writing companies which require writers to present records in a scientific and elegant format. For this motive, an internet content author must own above common writing abilities.

d) Business contact

The commercial enterprise record needs to have clarity. Poor writing skills can deliver the incorrect message and cause potential rejection of the concept.

Likewise, appointment letters and memos replicate at the call of the employer.

e) Technical Articles

Scientific and technological accomplishments can not be communicated verbally. They need to be conferred in a totally written type like scientific journals and articles. The scientific ideas ought to be communicated in powerful and complicated language. Poor verbal exchange capabilities will decrease the technical call of the involved cluster or person.

f) Government

To have a task inside the authority's sector, a person needs to fill in paperwork and write out programs. One must be equipped to jot down correctly and perspicuously.

g) Global dealings

Agreements between nations need advanced composing talent which should not any doubt or false impression on important ideas. The important files encompass treaties, exchange agreements, alliances and lots of loads of.

6. ALARMING TRENDS OF IN RECENT TIMES

The youth and youngsters of these days like looking at tv to reading books. Their speech communication is high-quality on the expense in their communication. Decision facilities have cropped up anywhere a whole lot of significance is given to speech communication capabilities. There has been a general deterioration within the everyday of verbal exchange. Folks use acronyms in emails and SMSes. The training system have to be overhauled and refresher guides run to arrest this bad trend.

When browse several articles on need-analysis, one issue that involves the mind is ESP (English for Specific Purposes). West Germanic, once learnt for a particular purpose, is additional necessary as a medium of receiving and reproducing the information of the opposite domains of information below study, than a separate subject to review. So, its role in information is very important and at identical time, an important one. in contrast to people who learn a language with a read to review the linguistic options and literary values, the others i.e. Students learning English for a particular purpose square measure several, and increasing speedily in numbers. To them, language is primarily and primarily, a tool to use for the sake of communication.

They have to be told it so as to take advantage of and specific one thing altogether totally different from linguistic options of language. The scholars of technical education, particularly Engineering discipline the researchers observe that the scholars UN agency learn English for a particular purpose square measure virtually poor at receiving and reproducing their domain subject

information through English; although identical method are often wiped out an excellent method if they use their vernacular language. Typically their use of West Germanic is therefore poor that they're unable to meet even the fundamental purpose of communication. This results in a whole failure as an expert. Researchers worked on the subject that aims at distinguishing and rectifying the errors within the use of West Germanic by the scholars of engineering discipline for UN agency English may be a tool / medium and wherever writing has been targeted. as a result of they're the scholars for UN agency English may be a second language. So, their initial output of learning a language would be within the kind of written answers. And if they err there, the error would be ossified and transferred to their speech, too. So as to resolve the matter from the grass root level, an intensive remedial programme to correct errors are often enforced.

7. CONCLUSION

Since language is additional of a medium and fewer of content for them, they have to pay special attention to the fundamental structures of language which may give them with a format during which they'll place the content they need. So, for them the foremost acceptable and correct language structures square measure as necessary as specific word at their field so as to speak effectively. Several investigations have been done, as detailed above, to determine what defines writing and the nature of writing. The complexity of writing, as well as the different concerns that must be addressed while teaching writing, necessitates an examination of the question of teaching writing. As a result, the role and value of writing instruction are examined in relation to other language abilities.
