(57) Abstract :
The invention discloses a system and method for enhancing real-time conversational fluency through AI chatbots designed for listening practice. Integrating advanced natural language processing, speech recognition, and adaptive learning technologies, the system simulates interactive dialogues tailored to individual learner proficiency levels. It provides immediate, context-aware feedback on pronunciation, grammar, and vocabulary usage, facilitating immersive language learning experiences. The adaptive learning engine continuously analyzes learner interactions to personalize conversational scenarios, ensuring alignment with learning objectives and progress. Accessible across various devices, this invention addresses the limitations of traditional language learning tools by offering a scalable, interactive platform focused on developing conversational fluency through real-time listening and speaking practice.
